

Thank you for purchasing Griffin Technology's PowerJolt SE in-car charger for iPod[®] and iPhone[™].

How To Use PowerJolt SE

Connect

- ▶ Plug PowerJolt SE into your car's cigarette lighter/power supply
- ▶ Plug dock connector into your iPod or iPhone.

Charge

PowerJolt's light ring indicates battery charging status at a glance:

- ▶ **RED:** PowerJolt is correctly plugged in, ready to charge your iPod or iPhone.
- ▶ **AMBER:** PowerJolt is charging your iPod or iPhone.
- ▶ **GREEN:** Your iPod or iPhone is fully charged.

Note that activity with your iPod or iPhone, such as turning on its backlight or causing its drive to spin, may cause PowerJolt to temporarily indicate that battery charging is occurring.

Troubleshooting

Connected iPod or iPhone is not charging, or there is no LED showing.

Check:

- PowerJolt fully plugged into lighter or power socket?
- Is dock connector firmly connected to your iPhone or iPod?
- Has your car's lighter fuse blown? (Check your owners' manual for instructions on locating and replacing the fuse.)
- Has PowerJolt's fuse blown? Replace with a mini automotive fuse (sometimes called a mini ATM-type fuse) rated at 2 amps, available at most general retailers, electronics and auto parts suppliers. For best results, remove and take the blown fuse with you to ensure a match..

2 Amp blade-type mini-auto fuse

Technical Specifications

- ▶ Input voltage range: 12 – 16 Volts DC
- ▶ Maximum current: 2 Amp
- ▶ Output voltage: 5 Volts DC at 500mA
- ▶ Fuse type: 2 Amp blade-type mini-auto fuse
